<sup>\*</sup> Included in South Australia.

<sup>\*</sup> Included in South Australia.

† Goods destined for oversea countries are largely transferred from one State to another for transhipment to the oversea country. For 1909 and the subsequent years such goods are, in this table, shewn against the State from which they were finally despatched from the Commonwealth. The exports from New South Wales and Victoria—the States in which transhipments are chiefly made—are thus inflated by the inclusion of goods consigned from other States. Owing to the discontinuance of the records of interstate trade from the 13th September, 1910, adjustment on account of transhipments can no longer be made. Taking the annual average of the transhipments recorded during the years 1907, 1908, and 1909, the New South Wales figures include exports of other States amounting to £3,036,672 net, per annum, and Victoria £1,003,714, which were originally despatched as follows:—From Queensland, £1,376,484; South Australia, £1,018,592; Western Australia, £8884; and Tasmania, £1,636,426. The great difference between the value of exports from Tasmania during the year 1901 and subsequent years is due to the fact that in the former year goods despatched from Tasmania for transhipment in other States were recorded as oversea exports from Tasmania, whereas in the later years they are included, for the most part, as exports from New South Wales and Victoria.

<sup>\*</sup> Owing to the failure to record as Oversea Imports, goods received in one State of the Commonwealth for transhipment to another State thereof, it has been estimated that the value of Imports given in this table is understated by the following amounts:—1901, £2,121,500; 1902, £1,546,924; 1903, £1,024,211. † Does not include the value of Stores shipped in Australian Ports on board oversea ships. The value of Ships' Stores was in 1906, £875,966; 1907, £998,897; 1908, £1,196,106; 1909, £1,071,677; 1910, £1,080,133; 1911, £1,238,446, in 1912, £1,431,985, and in 1913, £1,458,702.

Note.—The altered balance of trade in the years 1912 and 1913 is due mainly to loans raised in London. From 1st July, 1911 to 30th December, 1913, £21,039,450 was added to the amount of Public Debt held abroad.

#### Imports and Exports.

# No. 26.—VALUE OF PRINCIPAL ARTICLES IMPORTED AND EXPORTED DURING THE MONTH OF JUNE, 1914 AND 1913, TOGETHER WITH THE TOTAL VALUE OF THE SAME ARTICLES FOR THE SIX MONTHS OF THE YEARS 1914 AND 1913.

Compiled from information supplied by the Department of Trade and Customs.

(Subject to Revision.)

#### Miscellaneous.

### No. 67.—CHANGE IN STANDARD OF LIVING IN AUSTRALIA.

Increased Consumption of Commodities per Head, 1903 to 1912.—The following table shews for a number of commodities in common use:—(i.) The average annual consumption per head of the population in each successive five-yearly period from 1903-7 to 1908-12, as well as in the years 1911 and 1912 separately and (ii.) the ratios for the average annual consumption per head in each such period, compared with the average in 1911 alone (consumption in 1911 = 1000). In order to shew the general effect of the change in the consumption of all commodities taken together, index-numbers have been computed for each period. These index-numbers are shewn in the last line of the table.\*

#### DISTRIBUTION OF INCOMES IN AUSTRALIA.

The above table, viz., No. 69, furnishes a rough estimate of the distribution of incomes in Australia according to their magnitude. The table is based upon the Income Tax returns of all the States. These returns shew both amount of tax and distribution of incomes, excepting in the case of South Australia, which does not

shew the distribution. The distribution in this case was assumed to agree with the aggregate for the other States. In the case of New South Wales, the latest figures for incomes less than £1000, which could be used for this purpose, were those of the 1907 returns, owing to the fact that at the time of compilation incomes up to £1000 derived from personal exertion were not subject to income tax. An allowance based on the increase in population between 1907 and 1910 was made.

The significance of aggregation of incomes above certain limiting amounts can be measured—among other ways—by shewing what it would represent on the average to adults whose incomes do not reach the limiting amount. This is shewn in Table No. 69, and its weekly equivalent is given.

A second measure of the significance of the aggregates above the limiting amounts can be had by comparing them with the differences per capita of population between good and bad years in respect, say, of imports, exports, and production. These differences are shewn in the second table, No. 70, together with the corresponding value per adult, and give a kind of measure of the magnitude of the influence of favourable seasons on the well-being of the community, by shewing what, on the supposition of uniform distribution among adults, the difference of imports, exports, or production implies. The latter table gives also some indication of what—in the present conditions of the application of science and human effort to the production of wealth—may be called the limitations imposed by Nature, for the difference of production between one of the best and one of the worst years in the last decade amounts to only £23 0s. 3d. per adult.
